

TECHNICAL NOTES

The 2022 National Demographic and Health Survey (NDHS) is the seventh Demographic and Health Survey (DHS) conducted in the Philippines in collaboration with the worldwide Demographic and Health Surveys (DHS) Program and the 12th in a series of national DHS surveys conducted every five (5) years since 1968.

Funding for the 2022 NDHS was provided by the Government of the Philippines, while the provision of tablet computers for data collection was supported by the Commission on Population and Development (CPD). Other agencies and organizations that facilitated the successful implementation of the survey through technical support were the Department of Health (DOH), the Philippine Commission on Women (PCW), the University of the Philippines Population Institute (UPPI), and the United Nations Children's Fund (UNICEF).

The primary objective of the 2022 NDHS is to provide up-to-date estimates of basic demographic and health indicators. Specifically, the NDHS collected information on fertility, fertility preferences, family planning practices, childhood mortality, maternal and child health, nutrition, knowledge and attitudes regarding Human Immunodeficiency Virus (HIV) / Acquired Immunodeficiency Syndrome (AIDS), violence against women, child discipline, early childhood development, and other health issues.

The Women's Questionnaire collected information on general background characteristics including age, education, and household wealth status, for women age 15 to 49. In addition, the 2022 NDHS collected information on other measures of women's autonomy and status, particularly women's ownership of assets including houses, land, and mobile phones as well as their use of bank accounts and mobile-money-service providers. In addition, responses to specific questions are used to define three different indicators of women's empowerment such as women's participation in household decision making, women's attitudes towards wife beating, and women's participation in decision making regarding sexual and reproductive health.

The information collected through the NDHS is intended to assist policymakers and program managers in designing and evaluating programs and strategies for improving the health of the country's population. The 2022 NDHS also provides indicators anchored to the attainment of the Sustainable Development Goals (SDGs) and the new Philippine Development Plan for 2023 to 2028.
